SUMMARY

Backend-heavy Full-Stack Senior Software Engineer with 5+ years of experience designing, testing, and operating production web systems end to end using C# (.NET) and Go backends, Next.js and React frontends, and PostgreSQL and Redis on AWS. Experienced in owning system architecture from database schema design and multi-tenant isolation to frontend integration, Dockerized testing, Nginx configuration, and zero-downtime CI/CD deployments.

TECHNICAL SKILLS

Languages: C#, Go (Golang), TypeScript, JavaScript, SQL

Backend & Architecture: .NET (ASP.NET Core, EF Core), Clean Architecture, REST APIs, Multi-Tenant SaaS, RBAC, Bounded Worker Pools, SignalR, Hangfire, Idempotent Webhooks (Stripe), WPF (MVVM), Socket Programming

Frontend: Next.js, React, TypeScript, Tailwind CSS, State Management, Responsive Web UI

Data, Cloud & DevOps: PostgreSQL, Redis, MS SQL Server, MySQL, AWS (EC2, RDS, S3, SES, Lambda), Docker, Nginx, GitHub Actions (CI/CD), Automated Integration Testing

EXPERIENCE

REEA Digital Limited — Dhaka, Bangladesh

Senior Software Engineer — Jan 2024 - Present

Software Engineer — Dec 2022 - Jan 2024

- **Texera (Multi-Tenant Textile ERP - Sole Backend Architect, Team of 3):** Owned the backend architecture, database schema design, and code reviews while contributing across the Next.js frontend for a 24-module B2B ERP built with .NET, PostgreSQL, Redis, and AWS (EC2, RDS, S3); led delivery from initial commit to production rollout and mentored junior engineers to independent feature ownership.
- **Multi-Tenant Isolation & Security:** Engineered dual-layer tenant isolation in .NET and PostgreSQL using request-scoped tenant resolution middleware and automated EF Core query-level filtering across all 24 domain modules, maintaining zero cross-tenant data leaks in production.
- **Redis-Backed RBAC Engine:** Built a Role-Based Access Control (RBAC) engine evaluating ∼290 granular permissions across backend API endpoints and Next.js UI routes, caching permission state in Redis with targeted invalidation on role updates to eliminate per-request PostgreSQL permission joins.
- **DevOps, Testing & CI/CD Ownership:** Built automated integration test suites running against Dockerized database instances, authored Nginx reverse-proxy configurations, and managed GitHub Actions pipelines with zero-downtime database migrations.
- **Youmio (In-Game Store & Stripe Billing):** Engineered the Next.js CMS and storefront backend alongside .NET and Stripe subscription pipelines; implemented idempotency keys, webhook signature verification, and database transaction locks to handle concurrent checkouts with zero duplicate charges in production.
- **Asynchronous Batch Verification Service (Go):** Built a burst-tolerant email verification and scheduling backend in Go and PostgreSQL using bounded worker pools and AWS SES rate-limiting, processing ∼8,000 daily verifications and cutting batch execution time by 75% across 500+ email test batches compared to sequential processing.

Enosis Solutions — Dhaka, Bangladesh

Software Engineer — Apr 2021 - Dec 2022

- **.NET Concurrency & Memory Optimization:** Rebuilt UI layers and refactored a legacy .NET (WPF) desktop application into clean MVVM architecture, reducing memory footprint, improving UI responsiveness, and resolving 50+ thread-synchronization and race-condition bugs.
- **Hardware Socket Communication (Cianflone Scientific):** Upgraded and rebuilt the .NET (WinForms) desktop control interface and asynchronous TCP socket communication layer for an industrial X-ray spectrometer device.
- **Diagnostic Crash Telemetry:** Built an automated .NET crash-dump capture and diagnostic upload utility for a commercial gaming peripheral suite, shortening engineering bug reproduction and triage turnaround.

ACHIEVEMENTS & LEADERSHIP

- **Competitive Programming:** Achieved Codeforces Expert (1864 rating) with 1,900+ solved problems; placed 2nd and 9th in national inter-university programming contests (IUPC).
- **Problem Setter & Judge:** Authored original algorithmic problem sets and edge-case test suites for national collegiate programming competitions; mentored competitive programmers at the RUET Analytical Programming Lab.

EDUCATION

Rajshahi University of Engineering & Technology (RUET) — Graduated 2021

B.Sc. in Computer Science & Engineering | Rajshahi, Bangladesh

Languages: English (IELTS Academic: 7.5 - CEFR C1 Proficient), Bengali (Native)
